

Optimizing the matmul: One kernel to rule them all!

```
FOR I = 1, N:          ----- Dim 0
  FOR J = 1, N:         ----- Dim 1
    FOR K = 1, N:       ----- Dim 2
      C[I, J] += A[I, K] * B[K, J]
    ENDFOR
  ENDFOR
ENDFOR
```

} Different tiling combos possible
eg. tile (0, 1) OR tile (0) OR tile (1, 0)
